Exp 10: Performance Optimization in Zoho Creator

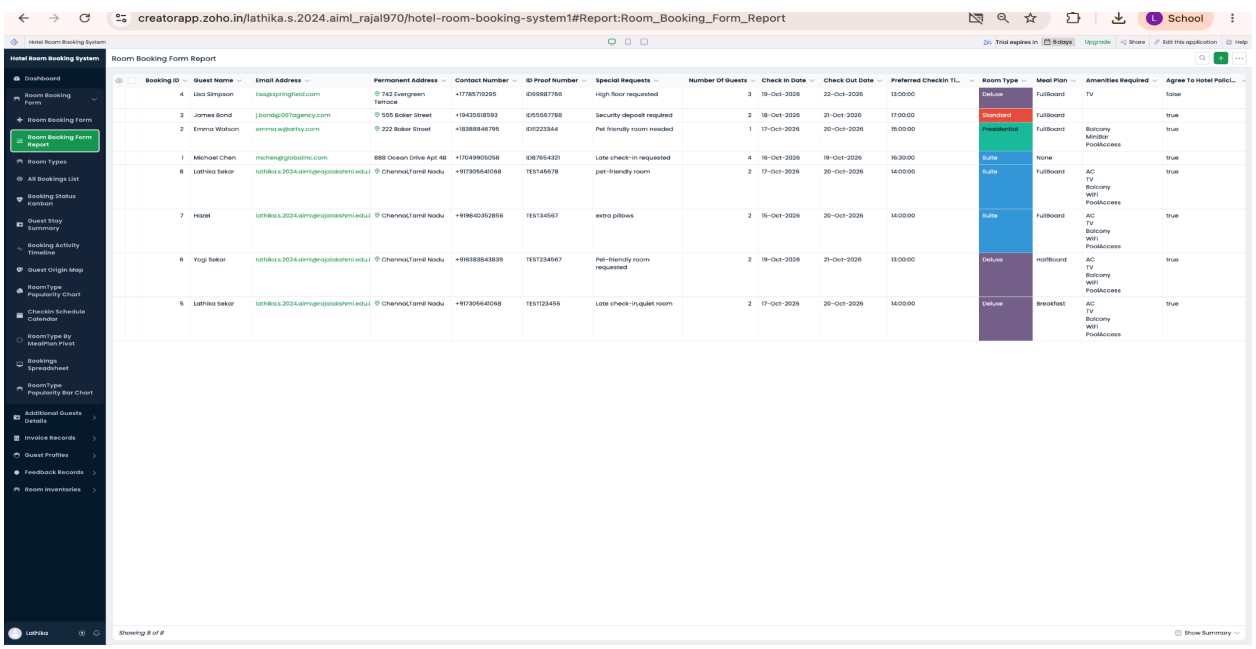

Aim

To identify and apply performance optimization techniques in Zoho Creator to improve application responsiveness, report loading, and workflow efficiency.

Procedure

1. Open the Hotel Room Booking System application in Zoho Creator.
2. Navigate to the Design section and review the existing forms, reports, and dashboards.
3. Identify reports that display large amounts of booking, guest, payment, or room inventory data.
4. Apply appropriate report filters to display only the required records, such as bookings by date or booking status.
5. Review workflows and Deluge scripts to identify unnecessary operations or repeated calculations.
6. Avoid unnecessary data retrieval inside loops and reuse retrieved values wherever possible.
7. Review dashboard components and remove duplicate or unnecessary charts and reports.
8. Test the forms, reports, and dashboards after making any changes.
9. Compare loading and response behavior before and after optimization, if measurable.
10. Record the changes and observations.

Result

Performance optimization techniques were reviewed and applied where applicable to improve the efficiency and usability of the Hotel Room Booking System in Zoho Creator.
