# Exp7: Zoho Creator API Integration

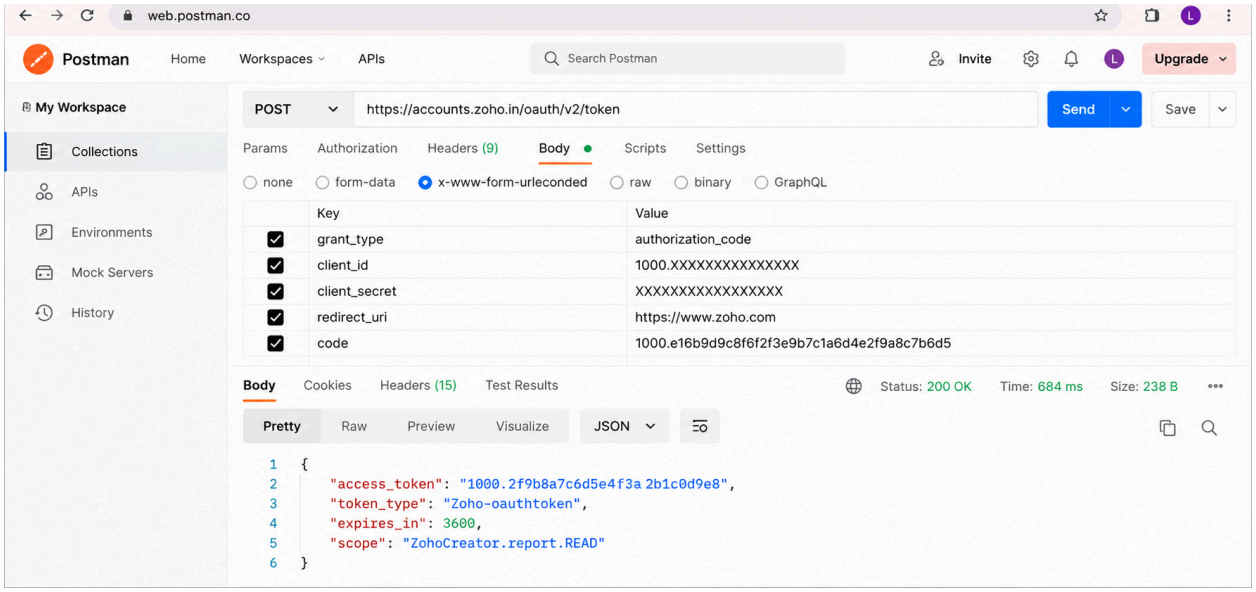

## Aim:

To study OAuth authentication and test API requests to retrieve hotel room booking records from Zoho Creator using Postman.

## Procedure:

1. Open the Zoho API Console and select the Self Client option.
2. Configure the scope as ZohoCreator.report.READ to allow reading report data.
3. Generate an authorization code using the configured scope.
4. Open Postman and create a POST request to https://accounts.zoho.in/oauth/v2/token.
5. Enter the required OAuth parameters, including the client ID, client secret, authorization code, redirect URI, and grant type.
6. Send the request to generate an access token.
7. Create a GET request using the Zoho Creator API endpoint and the report link name Room_Booking_Form_Report.
8. Select Bearer Token authorization and enter the generated access token.
9. Send the GET request and verify the response containing the hotel room booking records.

## Result:

OAuth authentication and API request testing were studied using Zoho Creator and Postman to retrieve hotel room booking records.
