Exp 8: User Management and Role-Based Access Control

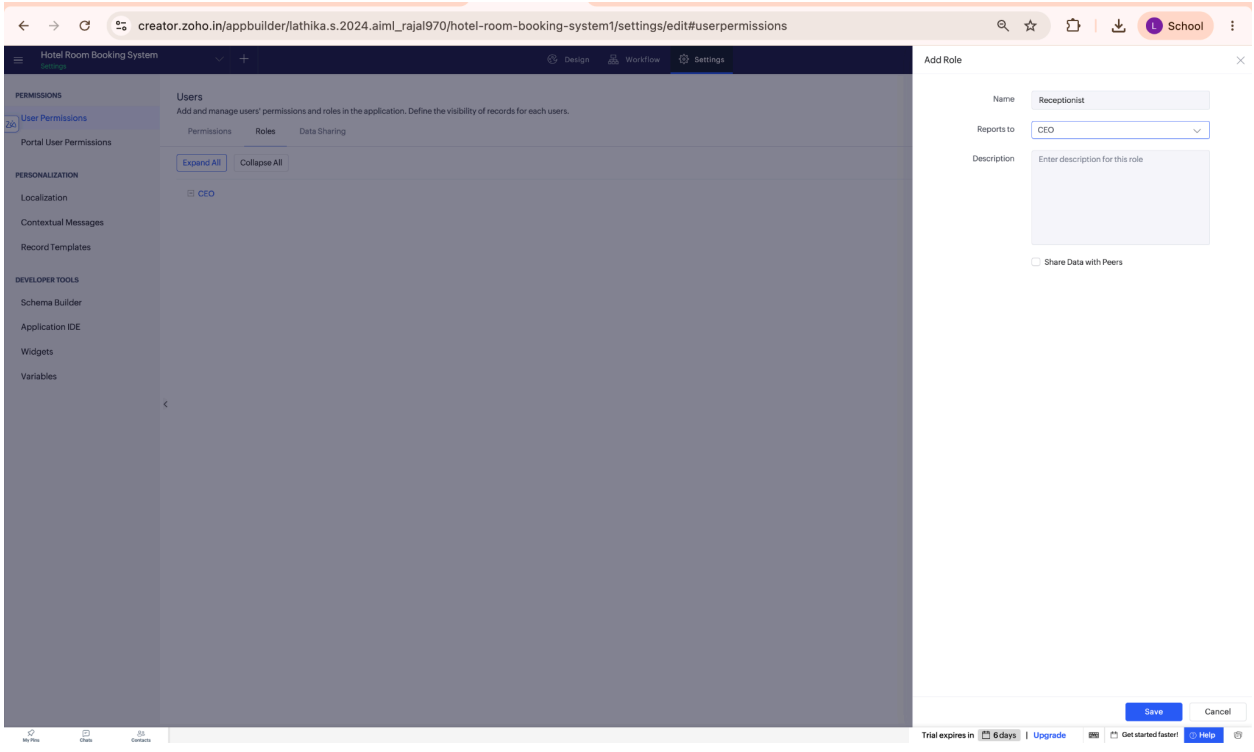

Aim:

To configure user management and role-based access control in Zoho Creator by creating user roles, defining role hierarchies, and setting permissions for different modules in the Hotel Room Booking System.

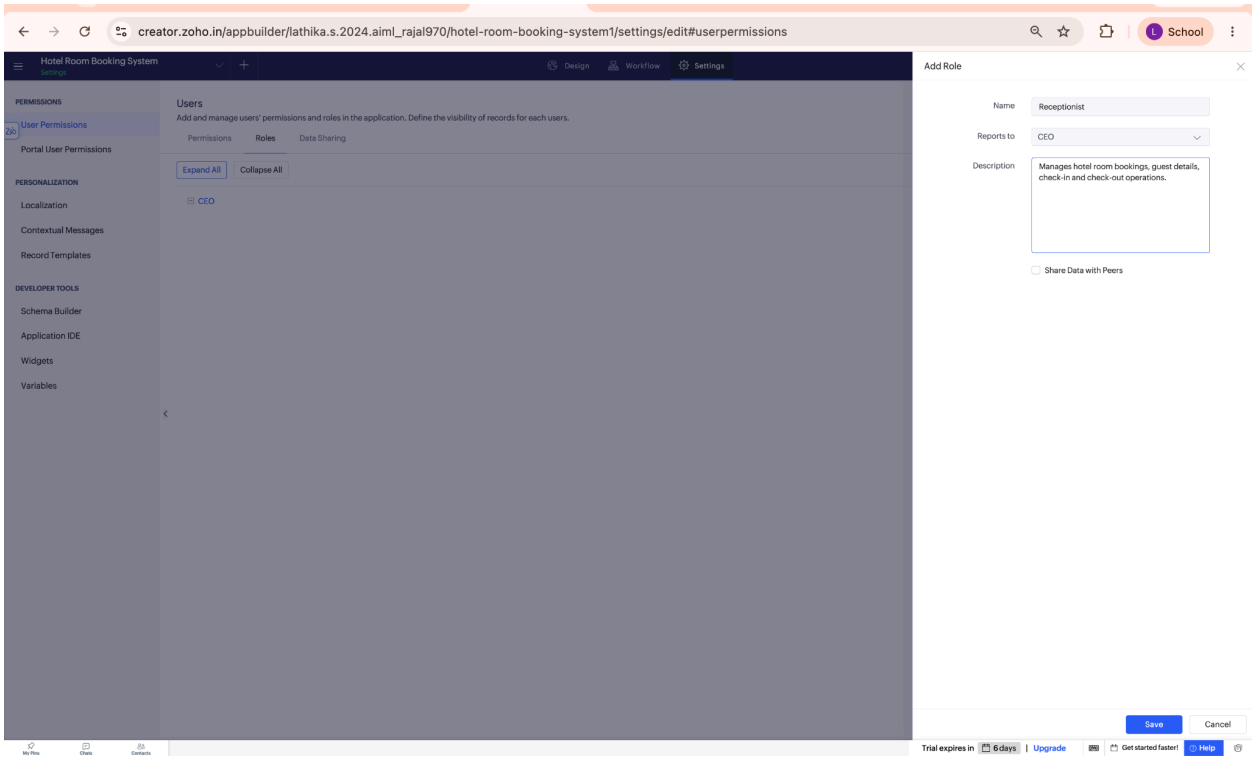

Procedure:

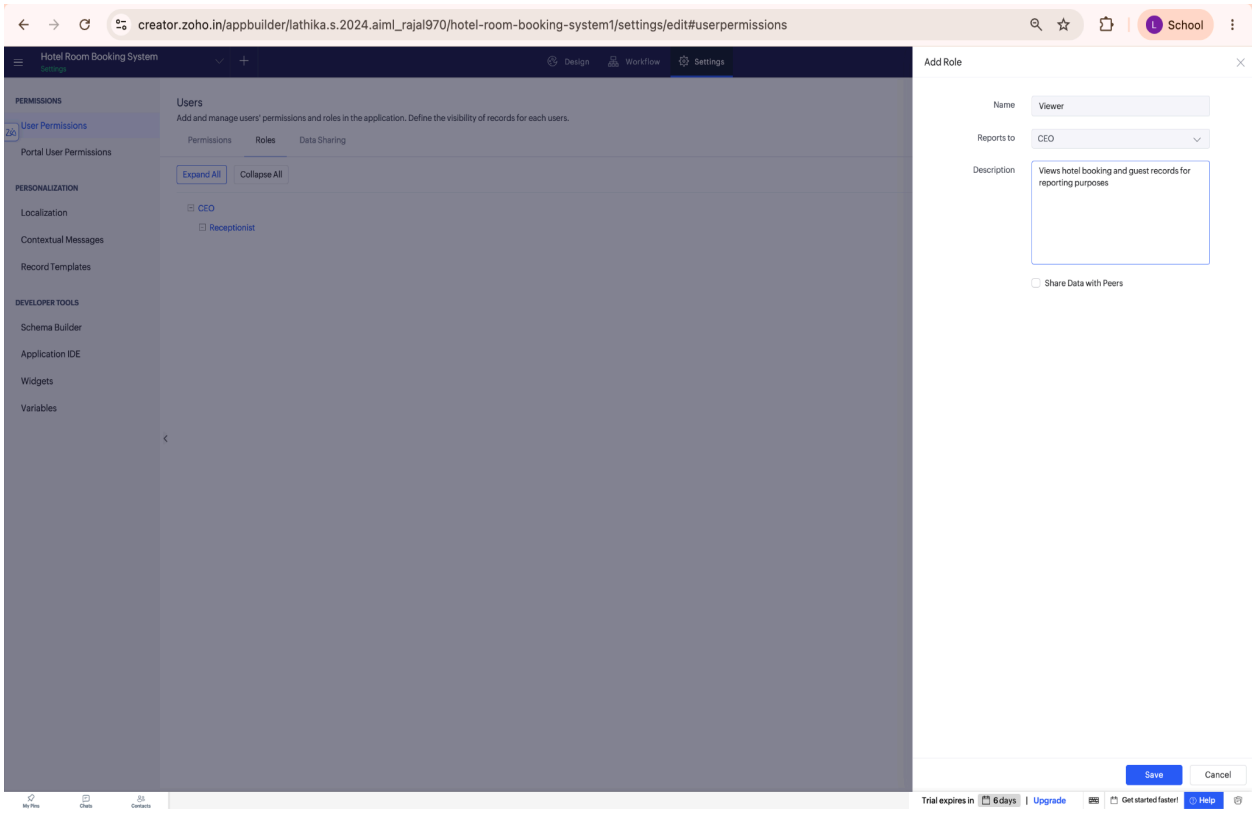

1. Open the Hotel Room Booking System application in Zoho Creator.
2. Navigate to Settings → User Permissions.
3. Open the Roles tab and create the Receptionist role, reporting to CEO.
4. Create the Viewer role, reporting to CEO.
5. Verify the role hierarchy containing CEO, Receptionist, and Viewer.
6. Open the Permissions tab and create the Receptionist_Access permission profile.
7. Configure the Receptionist profile to access relevant hotel booking, guest, invoice, feedback, and room inventory modules. Allow only the necessary viewing or editing operations.
8. Create the Viewer_Access permission profile and configure view access to relevant booking and guest records without edit or delete permissions.
9. Save the permission profiles and review the module-level access settings.
10. Open the Share option and select a user and permission profile if a separate test account is available.
11. Verify the role hierarchy and permission configurations.
