| EXP.NO:3 | Emerging Trends in Low-Code Development |
|---|---|

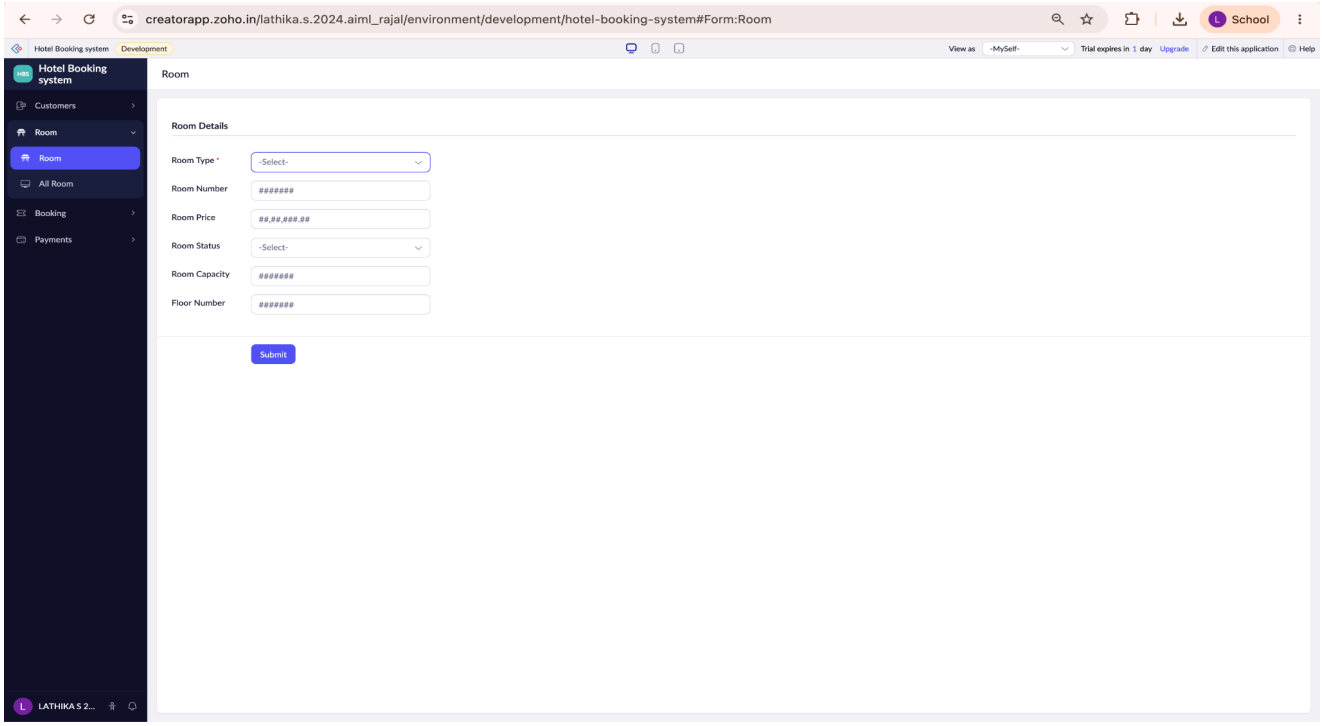

## Aim

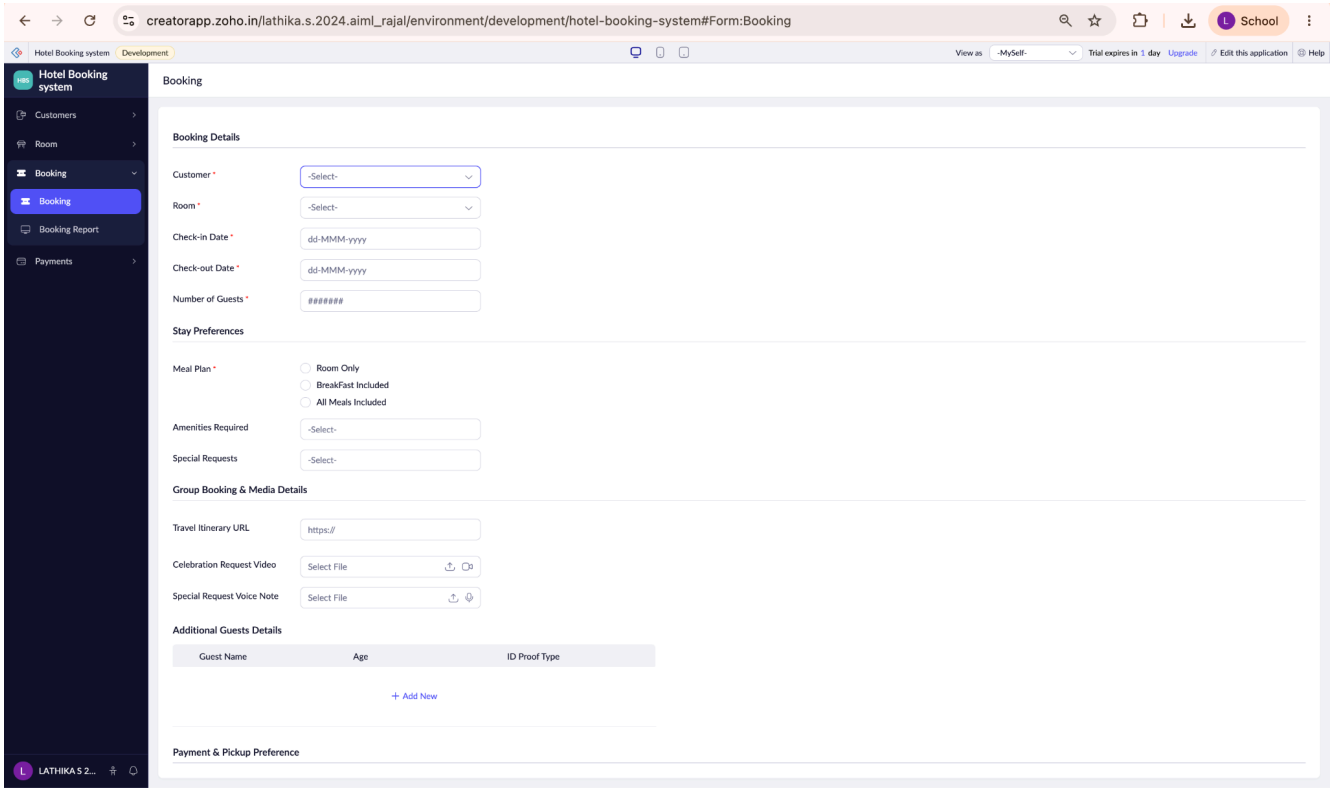

To study the latest trends in low-code development and understand how they support the development of a **Hotel Room Booking System**.

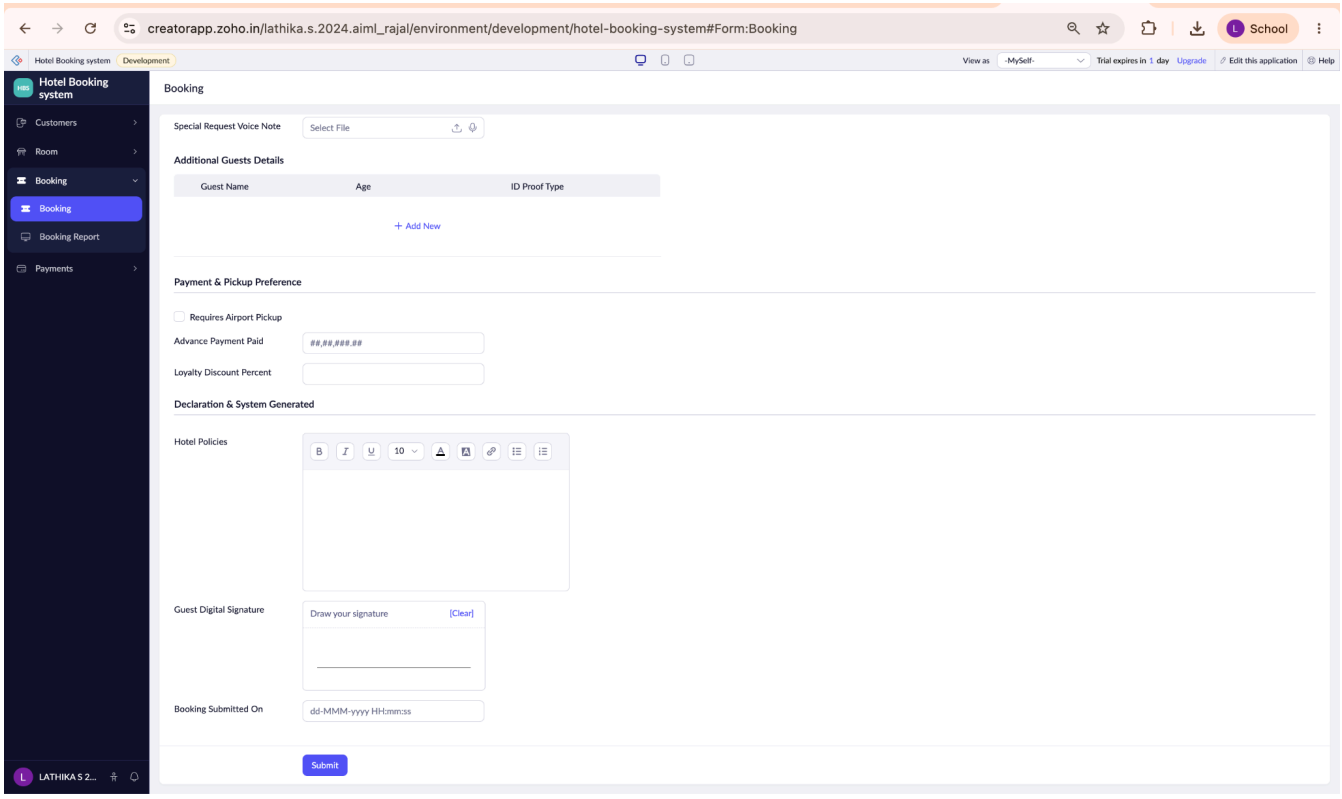

## Emerging Trends

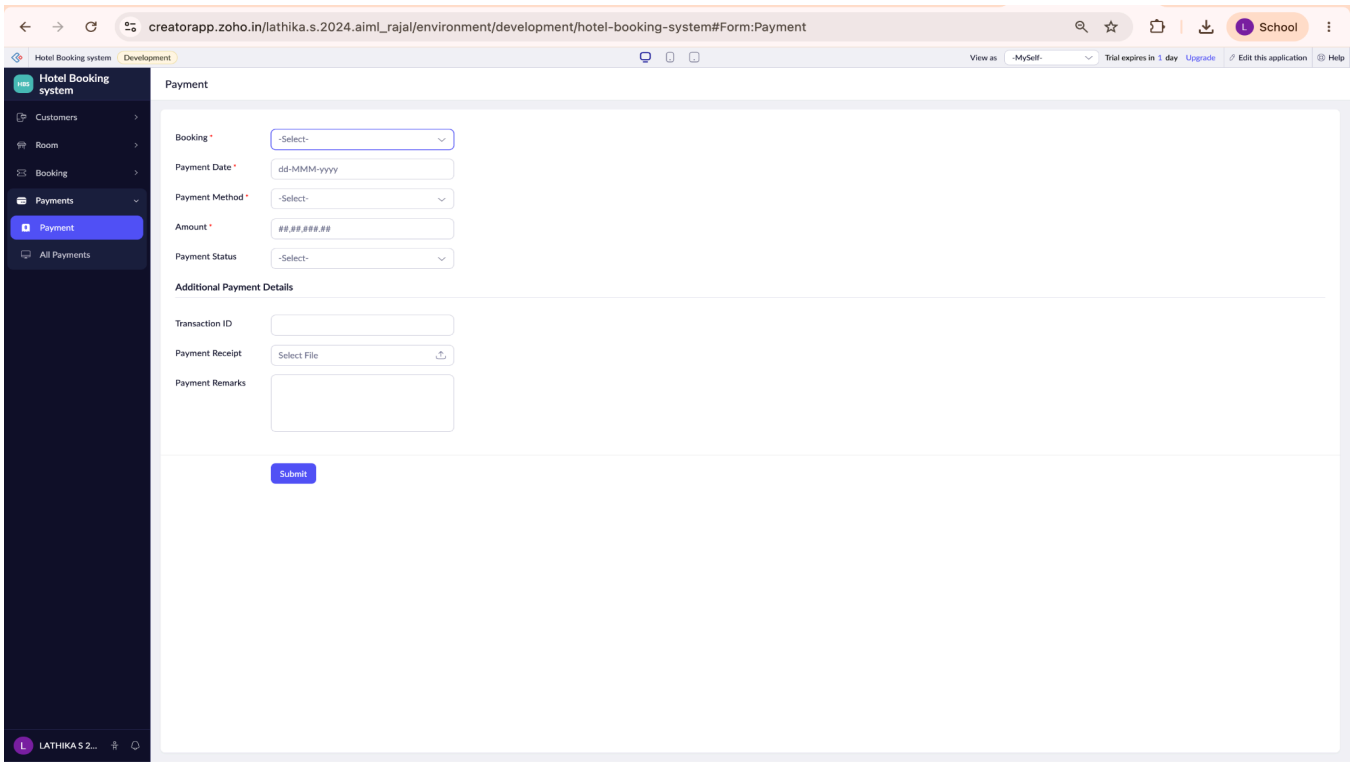

Low-code application development is becoming increasingly popular because it enables faster and simpler software development. Modern low-code platforms use **AI-assisted development** to generate forms and workflows, while **cloud-based technology** allows users to build and access applications from anywhere. They also support **mobile-friendly designs**, **workflow automation**, and **third-party integrations** such as payment gateways and email services. In addition, built-in **analytics and reporting** help organizations monitor application performance and make informed decisions. These emerging trends improve productivity, reduce development time, and make platforms like **Zoho Creator** an effective choice for developing a **Hotel Room Booking System**.

## Observation

- Low-code platforms reduce development time.
- Visual tools simplify application design.
- Cloud access and automation improve efficiency.
- Mobile compatibility provides a better user experience.

## Conclusion

Low-code development supports rapid application creation through **AI, cloud technology, workflow automation, and mobile support**. These features make **Zoho Creator** a suitable platform for developing the **Hotel Room Booking System**.
